Route Transfer Software

About RTSplus™

RTSplus™ software was designed to provide you with a low-cost, easy to use Automated Meter Reading (AMR) solution. RTSplus™ works in conjunction with the MREplus™ software on Mobile Computers.

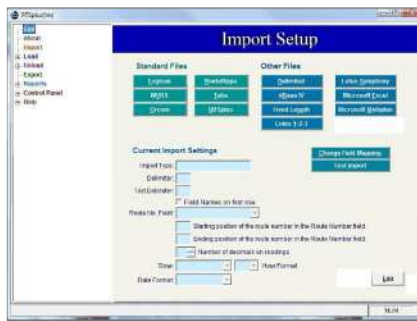

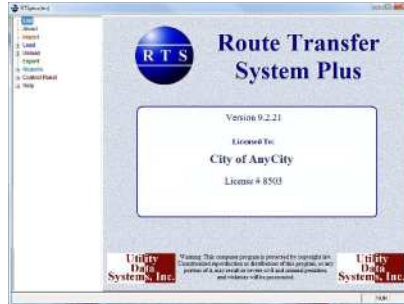

Works with Your Current UB Software

The RTSplus™ software works with your current utility billing software by allowing you to “map” the reading file exported from your billing system into the format your MREplus™ software in your Mobile Computer uses. Once you have mapped the reading file from your billing system, RTSplus™ remembers the map allowing you to load and unload your readings without re-mapping each reading cycle.

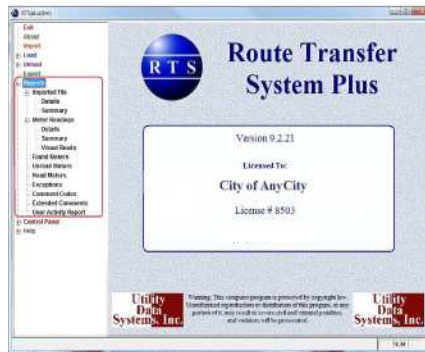

Powerful Reporting Feature

RTSplus™ includes a very useful, feature-rich report menu which includes:

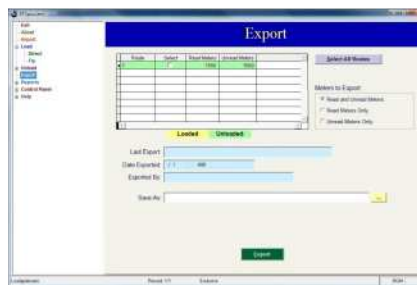

- **Meter Reading Detail** — Provides a “Proof List” of the meter reading file imported from the billing software.
- **Exception Report** — Special report providing supervisors a list of all services the meter reader viewed the “More Screen” on. This allows supervisors to curb “shade tree reading”
- **Read, and Unread Meters Report** — Lists all meters with readings on the Read Meters Report. Lists all meters without readings on the Unread Meters Report.
- **Comment Code and Extended Comment Report** — Lists all Comment Codes and Extended Comments entered by the meter reader or passed from the billing system to the Psion handheld.
- **Found Meters Report** — Lists all meters the meter reader entered as “Found Meters” in the Psion handheld. The report includes Customer and Location information.

RTSplus™ Features!

1. Simplifies the process of importing and exporting readings to and from the Mobile Computer.
2. Works with your existing billing software.
3. Facilitates data mapping. Map it once and never again.
4. Extensive reporting
5. Found Meters allows the utility to find and bill to abandoned or lost meters
